Two blue wires can control the receiver volume. Normal volume when wires are shorted. Maximum volume at about 3K ohms. You normally would short these wires at the time of installation.

Brown Wires go to Tip and Ring (not polarity sensitive)

White Wires go to the receiver inside the handset.

NOTE: Remove the Varistor from the Receiver Element!

Red and Black Wires go to Electret Low Output Transmitter

NOTE: Red Wire MUST go to the + on the Transmitter Element!
