

TSR Program (for DOS)

\$79.95
#CID40

for the Whozz Calling 4

This program will do all of the serial communications work for you! It creates a file for each line you're using on the Whozz Calling 4 box, on your file server (or wherever you want). Then it drops the Caller ID information into that file as soon as it's received from the Phone Company. It even creates a call log for you.

All you have to do is read the desired straight ASCII file into your program from any computer on your network, and use the information. It also saves NAME if provided from the telco. (*Does NOT work with 4 or 8 Lite units*). **Examples of how files look:**

```
whozz01.flg:  
$01 I E 0000 G A5 10/10 11:02 PM 6309807791
```

```
whozz03.flg:  
$03 I E 0000 G A2 10/10 11:05 PM PRIVATE
```

NEW!

Only **\$184.95**

• 250 call buffer • NO 1st Ring Supression or Blocking #CID6L

2 Port Whozz Calling!

Serial to Parallel Converter #SWI8B: **\$59.95**

NEW! WOW!

Whozz Calling 4 & 8 Lite

works with TCI, VODAVI & COMDIAL

Same great box as the Whozz Calling 4, but for Caller ID only... It doesn't decode DTMF, do Call Duration or block specific numbers.

You still get the First Ring Supression option, it will still decode Distinctive Ringing, and you can still chain units together to cover 128 lines! It can transmit in the TCI, Vodavi, Comdial formats, as well as the Whozz Calling format.

Works with our \$149.95 Callwhere Plus Software, which will do screen pops for ACT! and Gold Mine.

BIG SAVINGS if you only need Caller ID data!

4 Port: \$269.95 • 8 Port: \$449.95
