

AUTOMATIC LOOP CURRENT REGULATOR™

Improved for Better Modem Performance!

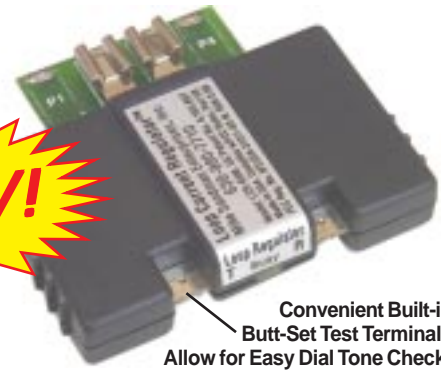

Modular Versions:

- 1 Line #WAL5S: \$38.95
(3 @ \$37.95)
- 2 Line #WAL5T: \$49.95
(3 @ \$47.95)

66 Block Versions:

- 66 Regulator #MIS1S: \$34.50
(6 @ \$32.50 = 20 @ \$31.50)
- 66 Test Shoe #MIS1T: \$29.95
(3 @ \$27.95)

Keep a Test Shoe in Every Truck!

Convenient Built-in Butt-Set Test Terminals Allow for Easy Dial Tone Check!

66 Block Version!

Our Loop Current Regulator™ automatically keeps the Loop Current on a line at 25ma - no matter what!

No dip switches, no meter, just plug it in (as long as you already know the line has high loop current). It will NOT lower the volume on the line! Your customer will be able to hear just fine even if the Loop Current Regulator™ is reducing the Loop Current by 80ma!

All models include a BUSY LED, which indicates when the line is in use. 66 Block Regulator includes terminals for monitoring the line with your Butt-set, and testing polarity.

66 Block Regulators simply take the place of the bridging clips on a split 66M block. Testing is EASY with our Test Shoe, which includes a switch to open the line from the equipment for testing, and terminals for your Butt-set. *Without the Test Shoe, it's hard to get your clips on the block to test the line without removing 1 or 2 Regulators from other working lines!*

Modular Regulators can be plugged right in to a modular jack (RJ11 for 1 Line, or RJ14 for 2 Line), or can be hard wired.

Line In-Use Indicator!

Test Shoe!

The Modem Protector™

If you use your modem on the road, you need The Modem Protector™ to keep your modem from getting fried!

Everybody at the company who goes on the road with their Laptop, needs one!

- The Modem Protector™ automatically brings current down to 25ma.
- Many hotel PBXs put out over 50ma of Loop Current, which will **destroy** your \$200 modem.
- Loop Current over 27ma often slows down data... The Modem Protector™ ensures maximum throughput!
- Adds surge protection for your modem, and any other device plugged in!
- The Modem Protector™ works with correct, or incorrect polarity.
- Can be used on any analog telephone line, or analog PBX extension. It prevents your modem from being blown up if you accidentally plug it into a digital phone jack!

Check Loop Current

One Button... It's Easy!

without Reading a Meter!

1. Plug the cord into a mod jack
2. Push the TEST Button
3. Read the Loop Current from LEDs

Super Accurate! ±.3mA

Loop Current Tester #TOH70: \$35.95

Deluxe Loop Current

Tester Kit #TOH7P: \$69.95

Includes Tester with K-Plug, 66M Block Adapter, Cloth Cords with Bed of Nails Clips, and Case
