

Modular Series Line In-Use Indicator with Large LED

The line powered **Modular Series Line In-Use Indicator with Large LED** has two mod jacks on one side of the box. These two jacks are for the phone line and the telephone or CPE device. It doesn't matter which jack you use for which, but the electricity **must** pass through this device before getting to the phone for the Large LED to operate when the phone is off-hook.

The Large LED will go on and off depending on whether the phone is off-hook or on-hook. The relay operates when current is flowing between the jacks when the phone or phone equipment is off-hook.

Modular Series Line In-Use Indicator with Large LED Specs:

- Connects **INLINE** to the phone line through the 2 jacks (use either jack for in/out)
- Large LED indicates Off-Hook (line powered)
- Ignores ringing and pulse dialing
- Large 20mm Bright LED
- Drops 12VDC, which reduces Loop Current about 25% (which may prevent the phone from operating if the Loop Current is too low)
